a) Townos que renor en cuenta
$$X/y=q2$$

$$\frac{X}{(0,2)} \frac{X}{S} \frac{X}{(2,5)}$$

$$\frac{(2,5)}{(5,10)} \frac{8}{2} \frac{7,667}{2}$$

relieures un mistograma para calculur la moda por semojanza es trialupulos:

$$\frac{16-2}{16-2+5-10} = \frac{2,669-2,5}{2,669-2,5+2,669-2}$$

$$P_{28} = \frac{55 \cdot 25}{13,75} = 13,75 < N_2 = 33 = 3$$

P2S = 0, 15 " os obcir, objer vor oblige al 25% "poor" vor asi obcirb.

$$C) \overline{X} = M_{10} = \frac{1}{N_{1}} \underbrace{N_{1} \cdot e_{1}}_{N_{1}} = 4_{16} \cdot 25 \text{ wases}$$

$$\overline{Y} = M_{01} = \frac{1}{N_{1}} \underbrace{\Sigma}_{N_{1}} \underbrace{y}_{N_{1}} = 0_{1} \cdot 6 \cdot 25 \text{ wases}$$

$$CV(x) = \frac{6x}{171} - \frac{2,317}{4,675} - 0,581$$

atou oriford la oritornaconyer don et

$$\Phi = \frac{M'' - XA}{N'' - XA} = \frac{XX}{X} = \frac{X}{X} = \frac{X}{X$$

$$\frac{6xy}{6x \cdot 6y} = 0,0367 = r$$

Las variables Tienen muy voca interdependencia lineal.

X	Yo
4,174	0,916 1,361
4,317	1,658 1,713
4,553	2,086 2,146

Cons vos pridon un nadob votoriol, es aplicanos un complio de sarial le a este vara deterner un modob lival y así pado deterner a y l

$$y' = y' + \frac{6x'y'}{6x^2} (x' - x')$$

$$\overline{x'} = m_{10} = \frac{1}{2} \sum_{i=1}^{2} u_{i} \cdot x_{i}' = u_{1}207 \text{ moles de auros}$$

$$\overline{y'} = m_{01} = \frac{1}{2} \sum_{i=1}^{2} u_{i} \cdot y_{0}' = 1.648 \text{ TRPF}$$

$$6x^{2} = m_{20} - \overline{x}^{2} = 0.08644 \text{ moles de auros}^{2}$$

$$6y'^{2} = m_{02} - \overline{y}^{2} = 0.08644 \text{ (x' - u_{1}207)} = 0.044$$

$$y' = 1.648 + \frac{0.08644}{0.044} (x' - u_{1}207) = 0.044$$

$$y' = 2.0744 \cdot 1 - 7.241$$

$$y' = 2.0744 \cdot 1 - 7.241$$

$$y' = 3.0744 \cdot 1 - 7.241$$

$$y' = 6.81 \cdot 10^{-4} \cdot 2.0744$$

$$y' = 6.81 \cdot 10^{-4} \cdot 2.0744$$

Por villiure, desnacouros el complio.

Come tonous gos comparar rond d) y

$$\eta_{Y/X}^{2}$$
 $r = 0,0369 = 3 r^{2} = 1,346.10^{-3}$

Para calcular tonous que calcular

 $6y^{2} = M_{02} - y^{2} = 4,328 TRPF^{2}$

Para calcular & varianza expletado,

Naconos las invagones:

 $8(50) = 2,184$
 $8(50) = 3,939$
 $8(75) = 5,288$
 $8(90) = 6,057$
 $8(90) = 6,057$
 $8(90) = 7,734$
 $8(90) = 8,652$
 $8^{2}y = \frac{1}{6} \approx (f(x_{1}) - y)^{2} = 4,653$

No $y/x = \frac{6^{2}y}{6^{2}y} = 0,245$

Como se produ Ozonar, esta ajusta
